

**IMPORTANT INFORMATION BEFORE CHECKING THESE GLL-FILES:**

To show the real engineering quality of our work, please note these GLL-files were measured **WITHOUT THE USE OF ANY PROCESSING** on the SC-speaker cabinets!

So small imperfections in phase and frequency can easily be improved using the processor settings that can be downloaded from our website: <https://synq-audio.com/aud/aud-spk/aud-spk-pas>

Free software to analyze GLL-files can be downloaded here:

<http://ease.afmg.eu/index.php/ea-tools-en.html>

Thanks for your support!
